At the end of the course, you will be able to:

1. Explain the relationship between the Earth's internal and external processes.

2. Describe the physical geology and the history of the Earth's crust, including the formation of igneous, sedimentary and metamorphic rocks, and the processes of erosion and deposition.

3. Understand the role of plate tectonics in the evolution of the Earth's crust and the formation of mountain belts and basins.

4. Apply your knowledge of physical geology to the interpretation of geological maps and cross-sections.

5. Evaluate the impact of human activities on the Earth's environment and the role of geology in the development of sustainable societies.

6. Communicate your knowledge of physical geology effectively in written and oral form.

7. Work in a team to solve a complex geological problem.

8. Demonstrate your understanding of the Earth's history and evolution.

9. Apply your knowledge of physical geology to the interpretation of geological maps and cross-sections.

10. Evaluate the impact of human activities on the Earth's environment and the role of geology in the development of sustainable societies.
