

SYLLABUS for course ASTB23, Title: Stars, Galaxies & the Universe
Fall 2017. The contents may change; please download updated syllabus ~every
week.

Lectures: Thursdays 12:00-14:00 AA206. Tutorials: Thur. 17:00-18:00 IC204,
(no tutorial at first meeting)

Calendar of lectures (L1...L24) and tutorials (T1...T10) with remarks:

7 Sept.	L1 + L2,	--	
14 Sept.	L3 + L4,	T1	(last day to add/remove courses 18 Sept)
21 Sept.	L5 + L6,	T2	
28 Sept	L7 + L8,	T3	
5 Oct.	L9 + L10,	T4	
12 -	no meetings, reading week		
19 Oct.	L11 + L12,	T5	
26 Oct.	L13 + L14	T6	<--- in-class midterm during T6
2 Nov	L15 + L16,	T7	
9 Nov.	L17 + L18,	T8	
16 Nov.	L19 + L20,	T9	(last day to drop courses w/o penalty 20 Nov)
23 Nov.	L21 + L22,	--	
30 Nov.	L23 + L24,	T10	

Final exam: date TBA (exam session 7-20 Dec)

[2 double-sided hand written (not printed or photocopied) sheets, i.e. 4
pages

of own notes are allowed at midterm, and 3 sheets (6p.) during the final
exam.

Calculators are required. Books, phones, other electronic devices not
allowed.]

Office hours: right after lectures, right after tutorial; other times as
well,
stop by and ask if you can talk to me.

Note: The updates to this syllabus will always be here available from the
course

web page: <http://planets.utoronto.ca/~pawel/ASTB23>

With some exceptions the topic number below coincide with lecture number.

See web page for textbooks. In the second part of the course the
provided

PDF lecture notes will important.

The relevant chapters/sections of the textbook #3 are indicated as,
for instance, Chapter 5.1, => [5.1], while [L10] would indicate
Lecture10 in PDF/PPT form, posted on our web page

0. Organization and goals of the course

1. Introduction to stellar (and planetary) astrophysics [L1]

* Unification of planetary sciences, connections w/physics

* Comments on the history of the idea of other stars and planets

2. The Present Revolution in Astronomy: An Overview

[1-Unnumbered] From p. xvii of textbook 1.

PLEASE READ - it's a very good overview, we skipped it during the lecture as it is indeed long, but you should read the whole 150+ page textbook, and questions from the this Overview may be asked on the quiz, as they relate to the Universe, for instance.

Until the midtem, we will follow closely our textbook 1 ("What are the stars")

1. What are the Stars?
 - * Historical Introduction
 - * The Photosphere
 - * The Interior of the Sun
 - * The Virial Theorem
2. Stars as Globes of Gas
 - * A Theory of the Stars
 - * Hydrostatic Equilibrium

	* The Strange Companion of Sirius	25
	* Gravitational Redshift	27
	* A Stellar Paradox: Have the Stars Enough Energy to Cool?	.
10	5. Fermi-Dirac Distribution	55
	* Pauli's Exclusion Principle	55
	* The Fermi-Dirac Distribution	56
	* Pressure laws of the Degenerate Electron Gas	58
	* Fermi Momentum	60
11	6. Quantum Stars	67
	* Fowler and Chandra	67
	* Chandrasekhar's Theory of the White Dwarfs	71
	* All Stars will Ultimately Find Peace	77
12	7. The Chandrasekhar Limit	79
	* Relativistic Stars	79
	* Chandrasekhar limit	84
	* Can All Stars Find Peace?	90

The 2nd part: Sparke and Gallagher book "Galaxies in the Universe"

13. Formation of disks and stars
 - * Giant molecular clouds
 - * Jeans instability of protostellar cloud cores
 - * Opacity-limited fragmentation
 - * Simulations: the ubiquity of protostellar disks, brown dwarfs
 - Accretion disks [9]
 - * AGN and quasars: accretion onto `black' holes
 - * Accretion disk geometry
 - * Disks as evolving, shearing flows
 - * Collapse simulations using SPH (smoothed particle hydrodynamics)

14. Introduction, The Milky Way [1]
 - [1.a] History of the discovery of the Galaxy
 - [1.b] The Great Debate about galaxies
 - [1.1] The stars
 - [1.2] Our Milky Way

15. [1.3] Other galaxies, Galaxy photometry
 - Hubble sequence, other classifications
 - [1.4] Galaxies
 - Typical properties and statistics of of galaxies
 - Gauss theorem and examples of its use. Laplace equation
 - Gravity force and potential
 - Spherical systems & Newton's theorems
 - Potentials of some simple systems
 - Potential- density pairs of flattened systems

16. [2] Mapping our Milky Way
 - [2.1] The solar neighborhood
 - 2.2 The stars in the Galaxy
 - The vertical structure of the disk / Distances to star clusters /
 - Bottlinger diagram, asymmetric drift

17. [2.3] Galactic rotation
 - Infrared & radio view of the Milky Way
 - Galactic bulge and Center (Nucleus)
 - Measuring the Galactic rotation curve

Einstein's cosmological constant Λ returns (Dark Energy)
